

CLAIMS:

1. A wireless terminal for transmitting/receiving data to/from a base device, the wireless terminal comprising:

receiving means for receiving, from the base device, first video data and associated data being associated with the base device and/or the wireless terminal;

first video generating means for generating a first video image based on the first video data;

second video generating means for generating a second video image based on the associated data; and

video superposing means for superposing the second video image on the first video image and displaying the superposed video image on a display section.

2. The wireless terminal of claim 1, further comprising a memory section for storing the associated data received by the receiving means,

wherein the second video generating means generates the second video image based on the associated data stored in the memory section.

3. The wireless terminal of claim 1 or 2, wherein the second video generating means generates the second video image by adding the associated data to template data stored by the wireless terminal.

4. The wireless terminal of any one of claims 1 through 3,

wherein the first video image is a television broadcast video image, and

wherein the associated data is EPG data.

5. A base device comprising transmitting means for transmitting the first video data and the associated data to the wireless terminal of any one of claims 1 through 4.

6. A wireless system, comprising:

the wireless terminal of any one of claims 1 through 4; and

a base device having transmitting means for transmitting the first video data and the associated data to the wireless terminal of any one of claims 1 through 4.

7. A wireless terminal control method for transmitting/receiving data to/from a base device,

the method comprising the steps of:

receiving, from the base device, first video data and associated data being associated with the base device and/or the wireless terminal;

generating a first video image based on the first

video data;

generating a second video image based on the associated data; and

superposing the second video image on the first video image and displaying the superposed video image on a display section.

8. A wireless terminal control program, which operates the wireless terminal of any one of claims 1 through 4,

the control program causing a computer to function as each of the means.

9. A computer-readable recording medium storing the wireless terminal control program of claim 8.
